ITS Remote Permanent Mount Adapter

Model Number: ITS-RB-PMA

DESCRIPTION:

This simple to use adapter allows users to utilize their existing Rain Master Pro-Max series remote products on select Rain Bird line of commercial controllers. And whether the controller is conventional or 2-wire, this device acts as a "smart" adapter allowing the remote to access the controller through its remote port rather than a by-pass device that simply sends power around the controller to the individual station terminals which is not typically possible on 2-wire controllers.

Being "smart" the controller will display what station the remote is accessing all the way up to station 200 on their 2-wire LXD series controllers.

This adapter can be permanently installed on a controller or it can be taken from clock to clock with a simple remote port plug-in and alligator clips on the two black and white power wires.

FEATURES:

- Intelligent Remote Connection
- Works on Standard or 2-Wire Rain Bird Controller *
- Utilizes Rain Master Pro-Max Field Remote
- Works with Stations From 1 to 200
- Works on Various Models Including;
