

ITS Two Wire Isolation Switch

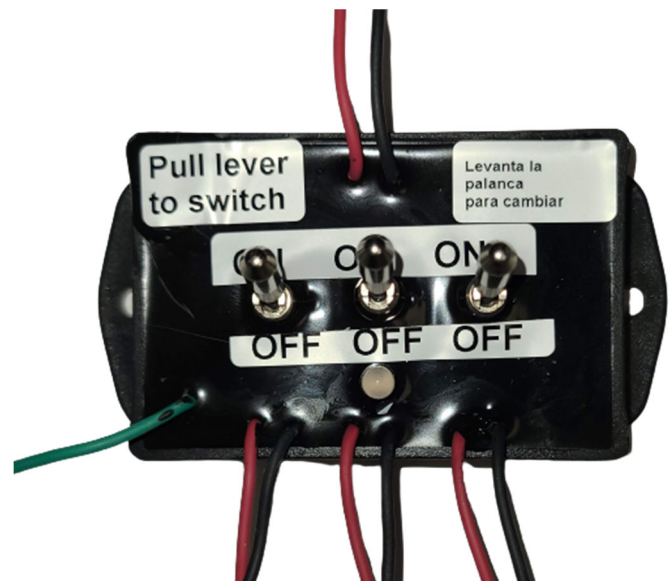

Model Number: TWIS

DESCRIPTION:

This device is a waterproof 2-wire isolation switch that can be used on any brand 2-wire irrigation system currently on the market. The purpose of the switch is to allow for the isolation of each separate 2-wire path whenever branching takes place. Typically, a short in the 2-wire path would cause the entire irrigation system not to operate. This device, which is located in the splice box where the branching takes place, allows the path to split from one input to as many as three independent outputs. Each wire path now has its own isolation switch. The green LED will help indicate what wire path has the short issue. Leaving the bad wire path in the off position allows the remainder of the system to operate until the short can be located and fixed. Mounting holes on the device allows for permanent mounting of the wall box wall..

FEATURES:

- Marine Grade Waterproof Switches
- Specialized Toggle Switches Protect From Accidental Switching
- LED Light for Short Indication
- 3M-DBYR Slice Kits Included with Switch (8 Units)
- Green Ground Wire for Additional Grounding Protection
- Color Coded #16 Gauge wire, 16" in Length.
- Mountings Holes for Valve Box Mounting
- Unit is Completely Epoxy Potted for Waterproofing

DIMENSIONS:

Width: 4"
Height: 2"
Depth: 1"
